Howdy,

A couple of questions for you.

For your dose-response study, what were the concentrations in the low vs. high dose reaches? did you just add no3/ no2 in any reach?

for the recent Clark Fork study, did your analysis conclusively demonstrate that TN was problematic in the headwaters? or, is that your presumption since the chl-a targets weren't being met?

MT keeps coming up at the CO hearing. thought it would be good to fire-back... can't say I'm impressed with Chapra.

Hoep you're doing well.

Tina
